EDUCATION

Cornell SC Johnson College of Business and Cornell Tech — **New York, NY**
Master of Business Administration (STEM Designated) — **5/2027**
- Forté Fellow

International Christian University — **Tokyo, Japan**
Bachelor of Liberal Arts in Science, Chemistry Major — **3/2018**

TECHNICAL PROFICIENCY

Technical skills - SQL, statistical analysis, process experimentation, equipment qualification
Additional knowledge - AI/ML literacy, agentic systems
Languages - Japanese (native), English (business), Chinese/Cantonese (business)

PROFESSIONAL EXPERIENCE

DISCO Hi-Tech America, Inc. — **Hillsboro, OR**
Process Engineer, Intel Customer Support — **10/2023 – 3/2026**
Manufacturer of precision semiconductor processing equipment.
- Owned end-to-end implementation of new DISCO equipment for Intel's next-generation device manufacturing, managing project schedules, on-site installation, troubleshooting, and process development against target timelines.
- Led a 15-person cross-functional team across R&D, sales, and manufacturing to co-develop a next-generation grinding process, reducing development timelines by 75%.
- Managed cost-reduction and yield-improvement initiatives for Intel's existing production lines; translated customer requirements into engineering solutions and product roadmap input for Japan-based R&D.
- Drove adoption of a patent-pending defect detection method to address a critical manufacturing defect across 10 newly installed wafer-processing tools; standardized the method across production tools.

DISCO Hi-Tech America, Inc. — **San Jose, CA**
Customer Process Engineer — **10/2022 – 10/2023**
- Managed new tool introductions and process improvement projects, integrating customer requirements, process data, and risk assessments to coordinate cross-functional delivery.
- Advised more than 30 U.S. semiconductor customer accounts on process development and optimization, connecting customer needs with technical solutions and operational improvements.
- Trained customer and internal engineers in process engineering best practices, strengthening technical capabilities, supporting adoption, and building long-term customer relationships.

DISCO Corporation — **Tokyo, Japan**
Process Engineer — **4/2018 – 10/2022**
- Partnered with R&D and engineering teams to translate customer manufacturing data and field feedback into product roadmap decisions for next-generation semiconductor equipment.
- Collaborated with software engineers to build data-analysis tools that improved process optimization and engineering decision-making.
- Designed and executed experiments to evaluate hardware and software concepts, analyzing results to inform product development decisions.
